

The **PETKUS Chemical Mixer Type 200** is used for mixing seed dressing.

Advantages:

- Robust and low wear construction
- Adjustable processing intensity

Description:

The seed dressing is filled into the mixer through a flap in the cover of the impeller type mixer. Water is supplied through the nozzle for the water connection. A float indicates the filling level of the impeller type mixer. The mixing process in the impeller type mixer ensures an intense circulation and thorough mixing of the liquids. The agitator is directly operated on the impeller type mixer. Furthermore the chemical mixer disposes of switchable relation speeds for a better mixing.

Construction:

There is an agitator in the impeller type mixer consisting of two brush strips. The impeller type mixer is driven with a gear motor.

Standard Equipment:

- Impeller type mixer made of stainless steel
- Agitator with two brush strips
- Cover with fill flap and nozzle for water connection
- Drive unit with electric motor
- Drain spout for emptying residues
